1.Website Specifications:

A. State the website objective, its goals in relation to the business.

The objective of Majestic Motor spares website is to design and develop a user-friendly platform for browsing and purchasing off-road (4x4) vehicle spare parts. This aims to provide customers with easy access to high-quality automotive components for Off-road cars and 4X4

Its goals in relation to the business are

- To increase visibility of the business online
- To improve customer experience through simple navigation
- To support sales through an online product catalogue and cart system
- To increase product visibility for popular off-road parts
- To expand market reach

b. State the target audience, showing their demographics and technical aptitude.

The **target audience** for this website consists of off-road and 4x4 vehicles users, spectators and outdoor adventures.

Demographics

Age range; 25- 55 years

Gender: mostly males because statistics show many males driving off-road vehicles

Location: Regional or rural areas and farming

Interest: Outdoor recreation, vehicle modification, adventure sports and safari

Technical aptitude

Many uses smartphones as primary devices

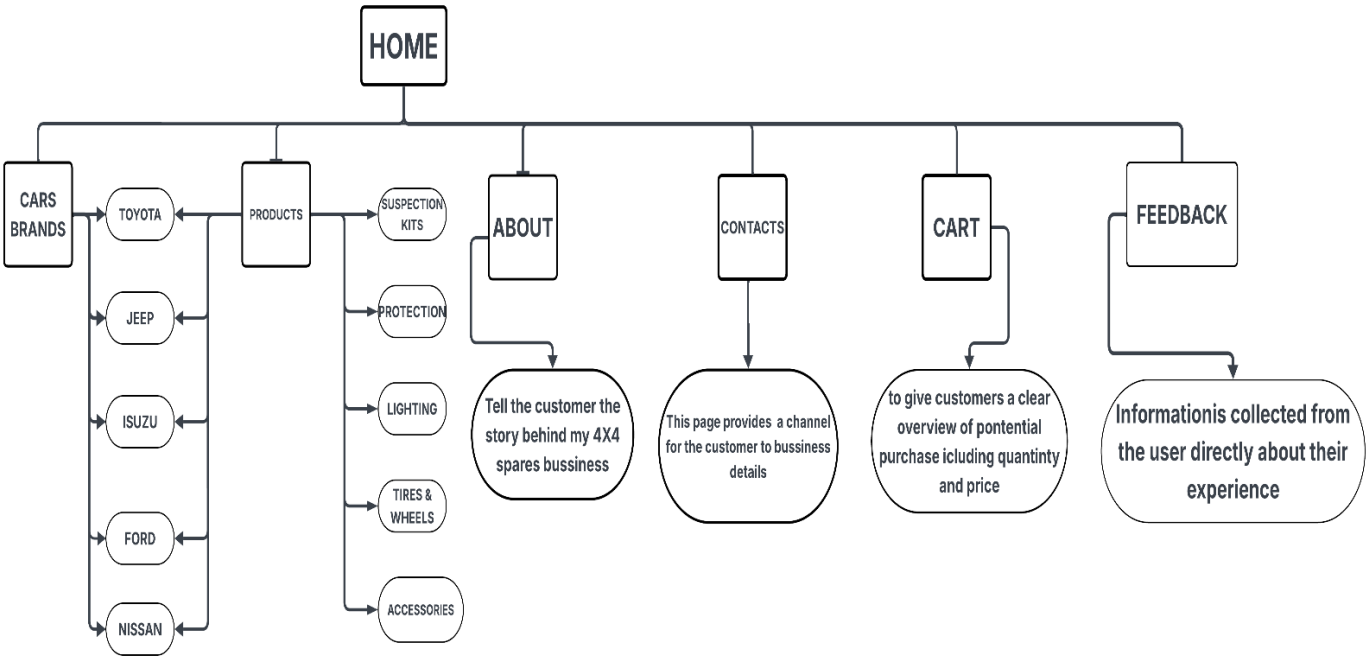
Expect quick loading, simple navigation and clear pictures

c. You must identify the type of website or content you will be designing for the use

- **E-commerce – my website will have a function of buying and selling good and services over internet for my off-roads and 4 by 4 automotive spares**

2.Information Design & Taxonomy:

SITE MAP



The flowchart structure shows how the website navigate and how users will move from the Home page to what they want. From there, visitors can easily open to Car Brands, Products, About, Contacts, Cart and Feedback.

In the Car Brands section customers can visit by their choice vehicle brands, maybe Toyota, Jeep, Isuzu, Ford or Nissan. The Products section is in many categories like suspension kits, protection gear, lighting, tires and wheels, and accessories, making it simple for customers to select what they want

The About page tells the story behind the business what to expect in the business and the trust they should gain while using the website

customers to share their experiences through a simple form in feedback.

Everything in the structure is easy to navigate and transact from different pages

4. Technical Brief: [5 marks] you are to state any technologies you will use in developing this website and any other resources (software tools, graphics tools etc.). Remember to choose software tools that match the complexity needs of your website.

Majestic Motor spares were developed using different technologies and software tools including the use of html 5 where I wrote the structure of the code with elements of header, navigation menu, products section and cart even adding images.

Usage of CSS for styling the website and improving its appearance in layout design, colors and editing fonts and hover effects

Java script to add dynamic features to my website and the function of cart and search button

The usage of Bootstrap Framework to make the website to be adjustable to different screen sizes

VScode for editing all my codes then GITHUB for hosting my websites
